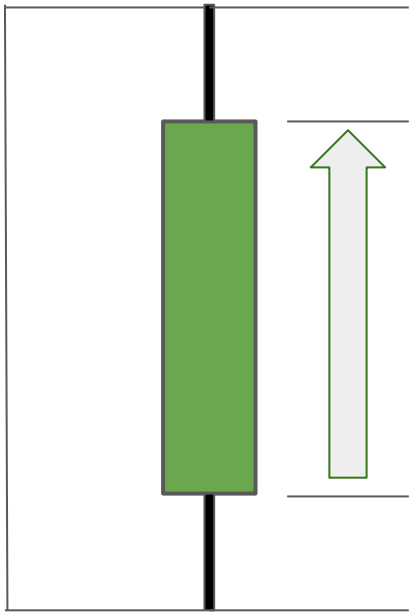
Green candles

The distance from the lowest price of the day to the highest price of the day is called **“trading range of the day” or “trading range” or “range”**



Highest price for that day

Close price, price of the last trade on that day

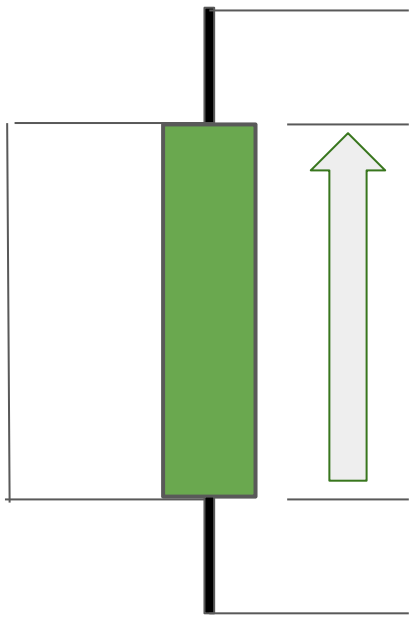
Open price, price of the first trade on that day

Lowest price for that day

Green candles

A candle has three parts:

A **body** shows a distance that price made from the price paid in the first trade made at the beginning of the day to the price paid by the buyer at the very last second of that day



Highest price for that day

Close price, price of the last trade on that day

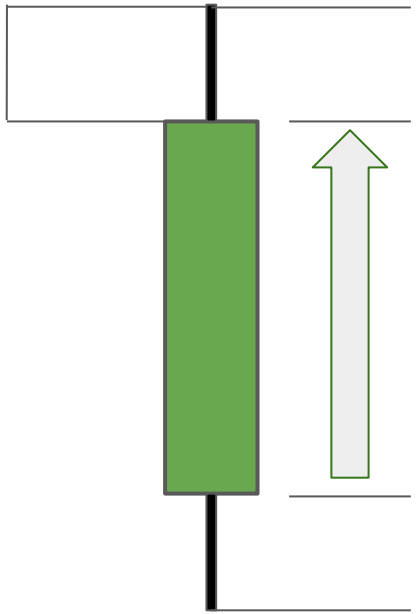
Open price, price of the first trade on that day

Lowest price for that day

Green candles

A candle has three parts:

An **upper tail** what part of a daily gain bulls gave up by the close of the trading session



Highest price for that day

Close price, price of the last trade on that day

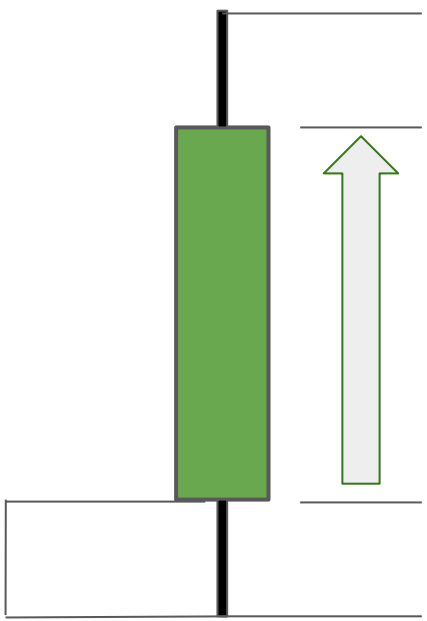
Open price, price of the first trade on that day

Lowest price for that day

Green candles

A candle has three parts:

An **lower tail** shows that bears were active in the morning. They pushed price down but then bulls stepped in and managed to push price higher over the open price



Highest price for that day

Close price, price of the last trade on that day

Open price, price of the first trade on that day

Lowest price for that day
